Question:

Plot a solution to the following differential equation:

$$y' + 5y = 0$$

Solution:

To plot a curve in the solution family, we take the initial condition to be

$$x_0 = 0, y_0 = 1$$

Using Euler's Method, we represent the the differential equation in the following difference equations:

$$x_{n+1} = x_n + h \quad (0.1)$$

$$y_{n+1} - y_n + 5hy_n = 0 \rightarrow y_{n+1} = y_n - 5hy_n \quad (0.2)$$

Now we can iteratively generate points which lie close to the graph.

For the following approximate graph, I chose $h = 0.01$ and $h = 0.01$.
